IT WORKS!

Your Tech Handyman—Building Tools That Do the Work for You.

I build AI tools and digital assistants that run in the background, handling your paperwork, follow-ups, and routine tasks so you can focus on what you do best.

⏰ Save hours every week   🔧 Remove manual work

📋 Stay organized automatically

TECH HANDYMAN SERVICES

Practical fixes that save time and boost your business

Digital Tune-Up

AI consulting plus tool setup that gets your business running smoother. We'll audit your current workflow, identify time-wasters, and build custom solutions that work behind the scenes.

Get Your Tune-Up

Form Fix

Turn clunky PDFs and paper forms into smart, automation-ready tools. Your clients fill out forms once, and everything else happens automatically—scheduling, follow-ups, invoicing.

Fix My Forms

AI Assistant Build

Custom bots and scripts that handle your follow-ups, client communication, and routine tasks. Like having a digital employee who never takes breaks and never forgets.

Build My Assistant

Website Visibility Boost

SEO improvements plus AI-generated content systems that keep your

website fresh and found. More visibility means more customers finding you when they need your services.

Boost My Visibility

AI-Powered Lead Capture

Your 24/7 lead generator that works even when you're busy. Smart forms and AI automations capture leads, organize them, and send follow-ups directly to your inbox or CRM. No missed opportunities, no manual chasing— just steady client flow.

About Christian Yates

I come from a background in sales and hands-on work, so I know the daily

grind of small business: endless paperwork, missed follow-ups, and never enough time. I've always loved computers and tech, so when I discovered AI's potential to solve these real problems, I became obsessed—not with flashy tech headlines, but with practical solutions that actually matter.

I'm not a lifelong developer. I'm someone who figured out how to make AI work for the people who need it most: small business owners too busy running their businesses to learn coding. I build simple, affordable AI tools that handle the boring stuff automatically—client follow-ups, form processing, scheduling, report generation.

My approach is straightforward: understand the problem, build something that works, make it affordable. No tech jargon, no enterprise pricing—just practical tools that pay for themselves by giving you your time back.

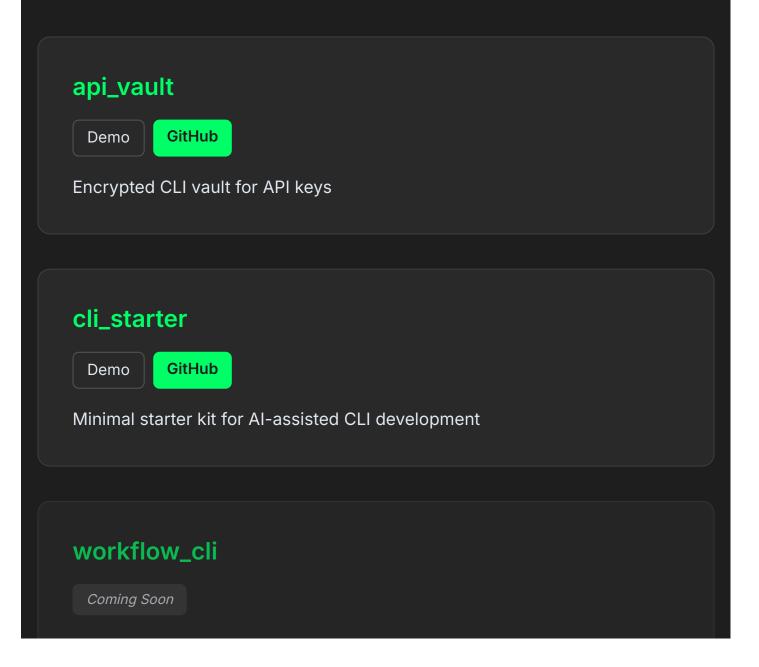

🧠 I KNOW NØTHING! LABS

This is where I document the tools I've built, the workflows I've tested, and

the lessons I've learned—so other people like me can skip the trial-and-error and start building faster.

No gatekeeping. No coding degree required. Just real-world fixes shared in plain language.

Building api_vault: Encrypted CLI for API Key Management

Managing API keys securely is a nightmare. Storing them in files, environment variables, or worse—hardcoding them—creates security risks. So I built api_vault, an encrypted CLI tool for secure API key storage.
